EDUCATION University of Houston, Ph.D., Economics 2020 (expected)
Indira Gandhi Institute of Development Research, Mumbai, India, M.Phil., Development Economics, 2014
Gokhale Institute of Politics and Economics, Pune, India, M.A., Economics, 2012
Sri Venkateswara College, University of Delhi, B.A.(Hons), Economics, 2010

FIELDS OF INTEREST Applied Econometrics, Development Economics, Urban Economics, Political Economy

WORKING PAPERS *Intergroup Contact and its Effects on Discriminatory Attitudes: Evidence from India*
[Job Market Paper]

Abstract: Living in diverse neighborhoods can reduce inter group prejudice. It may be difficult to identify the effect of such diversity on attitudes, since individuals self select into neighborhoods. Using random assignment of neighbors through a slum relocation program in India, I examine the effect of living among caste diverse neighbors on trust and attitudes towards caste. Using administrative data on the assignment of housing and data on attitudes from a survey I designed, I find evidence in favor of the contact hypothesis. Living among more caste diverse neighbors increases inter caste trust and support for inter caste marriage. I find a significant increase in the belief that caste injustice has increased. Having more caste diverse current and previous friends may be a channel for more favorable attitudes. My findings shed light on the positive effects of living in proximity to diverse social groups.

Technology in Agriculture and Religious Conflict

Abstract: I examine the effect of the Green Revolution on religious riots in India between 1957 and 1985. Applying an instrumental variable strategy in a district level panel dataset, I find that riots are longer after the Green Revolution is introduced, with a 1% increase in the duration of a riot. Employing alternative measures of riot intensity and incidence, I find suggestive evidence of an overall increase in religious conflict after the introduction of mechanization via the Green Revolution. I find that the Green Revolution reduced demand for labor in agriculture. This is consistent with mechanization reducing the opportunity cost of engaging in conflict. There is suggestive evidence to show that religious violence reduces in years when a non polarizing party is in power at the state level. Additional results indicate the mitigation of the effects of the Green Revolution on conflict in a good rainfall year and an increase in the intensity of conflict in districts in north India. My findings shed light on the unintended consequences of technology in agriculture as well as the mechanisms through which this technology influences ethnic conflict.
